RESD offers a solid preparation in environmental economics, a critical understanding of the issues involved in sustainable development both from a theoretical and practical perspective and of the complex interactions between economic decisions, market forces, governmental policies and the environment.

Built on a solid foundation in applied economics, this preparation will distinguish RESD graduates for their ability to critically evaluate the **qualitative and quantitative implications of environmental policies**, firm-level management and to autonomously produce research, forecasts and plans concerning the **evolution of markets for natural resources** and to contribute to the design, production and marketing of products compatible with the consumption of natural resources and their **sustainability**.

The course in numbers

90% international students and students not residing in Emilia Romagna

76% graduates aligned to the exam schedule

90% graduates satisfied with their studies

75% graduates who are working

48% graduates with experience abroad
